

# Common Drug Codes for India (Flat Files Package)

Release Date: May 21, 2021

## Introduction

Drugs (medicinal products) are one of the key data points captured and referred for continuity of care of an individual. In order for the drug information to be identified, stored, referred, and exchanged between different clinical, reporting, stock, supply chain, dispensation systems, it is important to have common drug codes across those systems.

Lack of common drug codes across different systems and healthcare setups invariably introduce local maps, formats, and naming conventions leading to input errors, missing information, incorrect identification, and other problems that surface due to lack of unique identities and diverging naming methodologies. This makes the exchange of health data a difficult and error-prone activity.

For a country rapidly digitizing its information systems and especially adopting digital systems in healthcare information management, this key piece of information must be codified and made available for use across all systems. A different system should be able to use the same codes with slightly different additional information to meet its purposes.

National Resource Centre for EHR Standards (NRCeS), a program of the Ministry of Health and Family Welfare (MoHFW), Government of India is providing these Common Drug Codes for India for use across healthcare records, supply and pharmacy systems.

## Release Summary

Common Drug Codes for India (Flat Files Package) has been introduced to support standardized coding and sharing of drug codes without the need of integrating the complete Terminology.
